BODY HARDWARE AND FITTINGS, TR2, TR3

WINDSCREEN HARDWARE AND FITTINGS, INTERIOR MIRRORS, TR2, TR3

The listings in the factory spare parts catalogue appear to be complicated, but it boils down to chrome plated brass frame and stanchions or polished aluminium frame and stanchions. Chrome plated stanchions and frame were specified for fitting with Dzus fasteners up to comm. no. TS60000, and either chrome stanchions and frames or polished aluminium frames with “bolt” attachments were fitted alternatively after TS60000, but our experience tells us that the chrome plated components are more common. Rubber windscreen seals are listed on page 140.

Part No.	Description	No.Off	List Price	Your Price

BODY HARDWARE AND FITTINGS, TR2, TR3

HARD TOP MOUNTING HARDWARE AND FITTINGS, TR2, TR3

Rubber seals for the hard top are listed in the chapter on Rubber Body Seals and Gaskets. The mounting kit listed is usually available. Other components are listed for reference. Most part numbers are taken from the late Spare Parts Catalogue. It is worth referring to the information supplied in the workshop manual, although some part numbers vary there, but there are some useful drawings and photos.

FENDER PIPING AND WING BEAD—TR2, TR3

All TR2s were fitted with plastic piping between the fenders and the body. Originally, this was manufactured in body colours and sold by the foot. This product has generally been unavailable, and we are listing it at this time for information only. With the current level of interest in TR2s, perhaps someone will think of a way to manufacture it, at least in one colour that could be painted in any colour. TR3, TR3A, and TR3B models were fitted with stainless steel bead strips secured in position with metal tabs fitted into the slot on the backside of the bead strips. Although sources have threatened to discontinue the stainless steel beads, so far we are able to supply it as needed.

Part No.	Description	No. Off	List Price	Your Price

REAR FENDER STONE GUARDS, TR2, TR3

Except for the first few TR2s, the same rear fender stone guards were used on all TR2, TR3, TR3A, and TR3B models. Original components disappeared just about the time The Roadster Factory was founded in 1978. Since that time, the reproduction parts available have been improved again and again, but they still leave something to be desired. In the past, we had a better source for a few years, but eventually, it dried up without a trace. The available stone guards require some work to make them fit to a high standard, but as can be seen at any car show, many enthusiasts are able to manage this task...

THRESHOLD FINISHERS, TR2, TR3

The factory spare parts catalogue names these as “Sill Edge Finishers.” They are not Threshold Plates by the common definition. TRF sells especially nice versions which are made in USA. The spare parts catalogue specifies pop rivets for securing the finishers to the sills, but I have also seen standard trim screws, and I will list these as well. These parts make a nice finishing touch to a newly-installed carpet set or interior.

900428/9

Part No.	Description	No.Off	List Price	Your Price
900428/9	Sill Trim Kit , all TR2, TR3, TR3A, TR3B; includes one pair of polished aluminium finishers	1		
552522	Rivet , pop, securing trim finishers	4		
YA165/CP	Trim Screw , securing trim finishers; alternative to previous	4		

HEADLAMP CHROMED RIMS, TR2, TR3

Three different headlamps were fitted to U.S. TR2 and TR3 models, including TR3A and TR3B. The one used in 1958 has an interesting rim which utilizes a clamp and screw at the bottom of the rim to secure it to the lamp. It is interesting but it is not available. TRF had a small stock of originals back in the early 1980s, but nothing has appeared since that time. The TR2 and TR3 rim, fitted from 1954-57, which is retained by one screw is readily available and quite inexpensive. The wide chromed rim used on USA models after 1958 has been manufactured to a high standard, but it is more expensive...

LUCAS STYLE FENDER MIRRORS, TR2, TR3

The Lucas-style mirrors listed here are only one version of the accessory mirrors manufactured by Lucas, Tex, and others back when the cars were in production. This style has passed the test of time, however, and it is still readily available. They are rather painful to adjust, either taking two people or requiring the driver to get in and out of the car until he or she gets them right. Obviously, these were made by Lucas originally, but today, they are made by a different manufacturer. The name “Lucas” no longer appears on the plate behind the mirror, but we have found that we made be able to get plates with the correct branding for the purist. TRF has manufactured the rubber gasket as a replacement part, as our customers have requested it. Note that convex lenses give a wider view, and some drivers like it on the RH aide to aid in parking.

Part No.	Description	No.Off	List Price	Your Price
FENDER MIRRORS , reproductions of Lucas originals; require a hole through the fender for installation				
TMP185	Fender Mirror , LH, flat lens	1

TMP188	Fender Mirror , RH, convex lens	1		
SLP111	Gasket , replacement, fender mirror; comes with new mirrors	A/R		
REP453	Back Plate , replacement, includes Lucas name as on original mirrors	A/R		

BADGES, LETTER SETS, AND NAMEPLATES, DATA PLATES, AND LABELS, TR2, TR3

FRONT APRON BADGES

As TRF is run by serious TR2 and TR3 enthusiasts, including our late founder, Charles Runyan and John Swauger, retired, who've done frame-ups on several cars, or perhaps I should say several frame-ups on the same cars. At any rate, TRF knows how these cars should be, and we have now had all of the badges, letters, and nameplates manufactured for us with the exception of the hub cap badges. Our front apron medallions are made by hand at an original supplier to Triumph in the old jewelry quarter of Birmingham. These badges are works of art. Our chromed letters and rear nameplate are made in Taiwan by our friend of more than twenty years. When he was commissioned to make them, he was shown original parts and parts made by others. We told him that there was no point in making them if they weren't better than the others. He has always started with what we want and worked as hard as necessary to accomplish just that. Charles always used to say that he wouldn't sell you parts that he wouldn't use himself, and the parts listed in this section were used on his car...

COMMISSION NUMBER PLATES

“It is important to know the commission number and model year of your car...”

All TR2, TR3 and TR3A cars had commission numbers that were prefixed “TS”, and it is important to know your exact commission number so you can order the correct parts for your car. TS60000 is a number where a lot of things changed on TR3A, but there are other important change points. TS4002 was the first TR2 made with sills and TS22014 was the first TR3A.

TRACING YOUR CAR'S HISTORY

“Useful Information to Have if You Are Restoring Your Car to Original, Interesting to Know Even if You Aren’t...”

You can order a birth certificate for your TR2 or TR3 (or most other British cars) through the British Motor Museum. To do this you must know the commission number of your car. The easiest way to order a birth certificate is to go to their web site at <https://www.britishmotormuseum.co.uk/archive/heritage-certificates> to order heritage certificates. Payment can be made by credit card. All available information about your car will be provided. Typical information includes build date, exterior colour, interior specification, body numbers (in some cases), final delivery destination, and options. Please note that only available data can be provided.
